Are you curious about technology or do you want to take your tech skills pro?

Cisco Networking Academy is a fast-paced program designed to get your IT career off and running. Starting with IT Essentials, this course will take you on a tour through computer and network technology common in the home and small business. If you know a little or a lot, this course will give you the foundation to take your skills to the professional level and start a rewarding IT career.

Beginners and experienced techies alike will enjoy this online course. It is adaptable to the individual learner. Advanced techies will benefit from the insider knowledge of the A+ exam and how to apply technology skills in a work environment. Beginning users will enjoy the ability to replay lessons and demonstrations, and apply the new concepts in the lab sessions.

The online course makes the class flexible to your schedule. Weekly group discussions are focused around applications of learning to the work environment and current issues in technology. Online study guides, flash cards, and test review also provide flexibility for learners who may need more time or a more comfortable environment to learn.

The Cisco academy online curriculum is continuously updated and accessible to students, even after they leave the class. This provides a wealth of information always available at the academy website.

Most important, completing the A+ Essentials course is your first step to the industry-recognized A+ and CCNA certifications.

Course Topics Include:
- Computer Hardware
- Computer Software
- Operating Systems
- Portable Electronics
- Printers
- Home Networks
- Information Security
